

Technical Data Sheet

Dust Tape Test Kit

Note: Read and follow the Dust Tape Test Kit operating instructions and ensure that all personnel are properly trained in the use of the kit and the requirements of ISO 8502-3 to achieve accurate and consistent surface cleanliness assessment before coating application.

Description

The Dust Tape Test Kit is used to determine the level of dust contamination on blast-cleaned or prepared surfaces before coating application. In accordance with ISO 8502-3, it provides a reliable method for assessing dust quantity and particle size, helping inspectors verify surface cleanliness and ensure the surface is suitable for painting or protective coating.

Features

- Complies with ISO 8502-3 for surface dust assessment.
- Measures the quantity and size of residual dust particles.
- Supports quality control before painting and coating applications.
- Complete kit includes 10× illuminated magnifier, dust evaluation tape, comparator display board, dust assessment plate, batteries, and operating manual.

Specification

Dimension of Kit	260 x200 x 80mm (L*B*H)
Weight of Kit	Approx. 800gm
Packing List	Complete with dust comparator display board, Dust Assessment Plate, Illuminated Magnifier (10X), Dust Evaluation Tape
